Dear Institute Mentors,

I'm excited to apply for the 2024 internship position at the Institute for Computing in Research. I understand that the Institute for Computing in Research is an extremely rigourous program that only accepts students who are well-equipped academically and I am prepared to take any steps necessary in order to successfully conduct research during this summer. I believe my skills in various fields of computing have thoroughly developed during my time as a student at Skyview High School's STEM magnet program and as one of the StormBot's leading programmer. As an aspiring researcher, I am thrilled at the opportunity to bring my interest to life through the the Institute for Computing in Research.

I am currently a Junior at Skyview High School's STEM magnet program with a specialization in computer programming. I have taken multiple Advanced Placement classes, including Computer Science A and Physics 1, which have assisted me in being able to improve my comprehension of complex topics. Not only this, I am also a part of a video game research development group, where we spend

My continuous experience in robotics has allowed me to develop a sincere interest in image recognition. In my past two years as a programming lead in my school's FIRST Robotics team, I have worked closely with image recognition in order to optimize game strategy with my peers.

I plan on pursuing a career in data science, specifically artificial intelligence, and I believe this opportunity can help me gain crucial experience in the field. Attached is my resume where I further expand on my extracurriculars which have developed my skills as an ambitious researcher. Please feel free to contact me and I look forward to hearing more about the institute. Thank you for your time and consideration.

Sincerely,

Kim Pham
